What is it like to have a baby in climate crisis?

This book explores the experiences of pregnant women and their partners, pre- and post-birth, during the catastrophic Australian bushfire season of 2019-20 and the subsequent COVID-19 pandemic. Engaging a range of concepts, including the Pyrocene, breath, care and embodiment, the authors explore how climate crisis is changing experiences of having children. They also raise questions about how gender and sexuality are shaped by histories of human engagements with fire.

This interdisciplinary analysis brings feminist and queer questions about reproduction and kin into debates on contemporary planetary crises.

‘This book brings a fresh perspective to reproduction. Focusing on the effects of the Pyrocene, it reflects critically on the experiences of having children in a time of ecological destruction.’ — Sonja van Wichelen, University of Sydney

‘There is a palpable urgency to this work, and genuine depth to the data and the arguments presented. An important, timely and sophisticated book.’ — Eeva Sointu, York St John University

About the authors:

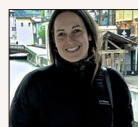

Celia Roberts is Professor at the Australian National University.

Mary Lou Rasmussen is Professor at the Australian National University.

Louisa Allen is Professor at the University of Auckland.

Rebecca Williamson is Researcher at the Australian National University.
